

Rules for online participation in the KhIMIO - 2026 Olympiad

General rules

1. Countries that are unable to participate in KHIMIO-2026 in person (offline) may participate online only with the approval of the KHIMIO-2026 Organizing Committee.

All participants taking part in the online format are considered unofficial participants and are not eligible to receive medals, but online participants may still follow their results through the general standings. All unofficial participants must be officially registered by [website](#).

2. Additional participants and additional team leaders from one country are allowed to participate in the KhIMIO 2026.

3. All registered unofficial participants must comply with [4th KHIMIO](#) requirements and participation rules.

4. A secure Examination center must be established for unofficial participants, where they can take the exam under supervision. Unofficial participants will not be allowed to participate remotely from their homes, except in exceptional circumstances and with special permission from the Organizing Committee.

5. The Olympiad processes in mathematics and informatics are the same at the following times:

Round 1 will be held on June 3 from 09:00 a.m. to 01:00 p.m. (UTC+5);

Round 2 will be held on June 4 from 09:00 a.m. to 01:00 p.m. (UTC+5).

This schedule is subject to change by the Organizing Committee. Any modifications will be communicated to the participating sides in a timely manner.

6. Phones, smartwatches, notes, scientific calculators, external storage devices, second monitors, communication software, earphones, AI assistants, and any other materials that may compromise the integrity of the exam are strictly banned.

7. Bringing any prohibited items into the exam hall, using or attempting to use them, accessing unauthorized websites, or disabling/stopping the screen recording will result in immediate disqualification from the Olympiad, subject to the final decision of the Organizing Committee.

Examination Center (exam room/hall)

8. Each online participating country must establish at least one official KhIMIO Exam Center.

9. The examination center must meet the following requirements:

- to be a safe and quiet place;
- be able to accommodate all participants with 2 metres distance respectively;

- to be free from strangers during the competition;
- have a stable electricity supply and internet access;
- be equipped with a sufficient number of computers, printers, scanners and video monitoring devices;
- be approved in advance by the KhIMIO Organizing Committee.

10. If necessary, a country may request permission to use more than one examination center. Such a request must be submitted 2 days before the first/second competition day and approved by the Organizing Committee.

Responsible people

11. Countries participating online must appoint a separate Team Leader, Proctor and Technical Coordinator for each discipline.

12. **The Team Leader** is responsible for:

- making connection with the KhIMIO-2026 Organizing Committee regularly;
- receiving the problems, translating them into the national language, and distributing them to the participants within the specified timeframe, upon authorization from the Organizing Committee;
- ensuring that all rules are followed.

Team leaders are responsible for ensuring that team members fully understand and follow these rules.

During the competition, the team leader is strictly prohibited from having unauthorized contact with the participants.

13. **The Proctor** is responsible for:

- verifying the identity of all unofficial participants with official documents (passport) and admitting unofficial participants to the examination center without unnecessary things;
- ensuring that unauthorized materials are not used;
- ensuring peace and quiet in the examination center;
- provide participants with pens, white paper, and water as needed;
- monitoring the connection of participants to a special platform provided at the appointed time informatics participants;
- secure publication of problems exactly on time;
- distributing printed materials to participants;
- ensuring the integrity of the competition;
- controlling not to use of prohibited sites and resources;
- monitoring compliance with all rules.
- collect the answer sheets after the allotted time has expired;
- scan and send answer sheets to the official email right after olympiad ends (khimio@olympcenter.uz);

14. **The Technical Coordinator** is responsible for:

- stable internet connection;
- camera settings;
- online live stream;
- solving technical problems.

The technical coordinator must be present at all times during the competition.

Mathematics Olympiad Format

15. The KHIMIO-2026 Mathematics Olympiad will be held in the following two rounds:

(240 minutes) allocated to complete 4 problems, and each problem is rated out of a maximum of 10 points (total 40 points).

(240 minutes) allocated for completing 4 problems, and each problem is rated out of a maximum of 10 points (total 40 points).

In two rounds, participants will be awarded a maximum total of 80 points.

Participants must be admitted and settled into the rooms 1 hour before the start of the Olympiad.

A. Procedure for delivering problems in mathematics

16. Tasks for each type of mathematics will be sent by the KhIMIO-2026 Organizing Committee to the responsible people of the Examination Center through the official communication channel or official email.

17. Problems may only be opened, downloaded, and printed by responsible people at the times designated by the Organizing Committee.

The responsible people must provide an online live stream to the Organizing Committee during the process of receiving and translating problems them into their national language.

18. It is strictly forbidden to open, reproduce, distribute or show the problems to participants in advance.

19. The printing process of problems is carried out under the control of the Proctor and Technical Coordinator. The printing location must be visible through the camera.

20. Printed problems will be distributed to participants only at the official start time set by the Organizing Committee.

21. Each round starts at 09:00 a.m. (UTC+5). Participants will be given tasks at this time. This schedule is subject to change by the Organizing Committee. Any modifications will be communicated to the participating sides in a timely manner.

22. The time allotted for each round is 4 hours, or 240 minutes.

23. After the round ends, i.e. at 01:00 p.m. (UTC+5), participants must stop writing immediately.

B. Procedure for translating problems

24. Countries participating in the online competition may request that mathematics problems be translated into their national language.

25. Preliminary translations of problems may be prepared by the KhIMIO-2026 Organizing Committee using artificial intelligence tools, including ChatGPT.

26. The initial translation is only a supporting text. The final responsibility for its accuracy, precision and relevance to the content of the problems lies with the Team Leader of the participating country online.

27. The preliminary translation prepared by the Organizing Committee will be sent to the Team Leader at the appointed time before the start of the exam.

28. The team leader may check the initial translation and, if necessary, make grammatical, terminological, or substantive corrections.

29. During the process of correcting the translation text are prohibited:

- changing the mathematical content of the task;
- simplify or expand the condition;
- provide additional explanation;
- add phrases that point to a solution;
- include any explanation that gives an advantage to the participants.

30. The team leader confirms that the corrected translation text corresponds to the official problem text.

31. Only translated text that has been checked and approved by the Team Leader may be distributed to participants.

32. Problems and their translations should not be shown to participants, trainers, or other unauthorized people until the translation process is complete.

33. Approved translation problems will be distributed to participants only at the official start time on June 3 and June 4 at 09:00 a.m. (UTC+5).

34. If during the competition an ambiguity, error, or incomprehensible part is discovered in the translated text, participants may contact the Organizing Committee only through the Proctor.

35. Any comments, translation changes, or additional explanations not authorized by the Organizing Committee are prohibited.

C. Procedure for accepting completed work

36. Work completed in mathematics will be accepted in the form of written answer sheets from participants.

37. Each answer sheet must clearly indicate the following information:

- participant's name and surname;
- country;
- participant code or number;

- problem number;
- page number.

38. After the round is over, the Proctor will immediately collect all answer sheets.

39. The collected answer sheets will be scanned by Proctor and prepared in PDF format.

40. The scanning process is carried out under the supervision of the Proctor. The scanning area must be visible through the camera.

41. Scanned files:

- readable;
- complete;
- in the right order;
- straight ahead;
- Must follow the naming convention established by the organizing committee.

42. The work of each participant will be sent to the official email in the form of a separate file or a designated common file in the manner determined by the Organizing Committee, or sent via the communication channel specified by the Organizing Committee.

43. Completed work must be submitted within the period set by the Organizing Committee after the end of the tour.

44. Entries submitted after the deadline may only be considered if the Organizing Committee is immediately notified of a technical problem.

45. Photos taken with a phone camera will not be accepted as answers unless specifically permitted by the Organizing Committee.

Informatics Olympiad Format

46. The KHIMIO-2026 Olympiad in Informatics will be held on an online platform for 2 days, and participants will be given 4 problems each day. Each problem that is fully completed and automatically accepted by the information system will be evaluated with 100 points, and all problems will be evaluated with a total of 800 points. Participants will be given 5 hours each day to complete the tasks. The results of the participants will be formed only on the basis of the points they have collected, that is, no penalty points will be given for incorrect attempts. Participants are required to write program codes to complete the problems only in the C++ programming language.

In computer science, the process is carried out in the following order:

A. Procedure for delivering problems in informatics

47. Tasks for each type of informatics will be sent by the KhIMIO-2026 Organizing Committee to the responsible people of the Examination Center through the official communication channel or official email.

48. Problems may only be opened, downloaded, and printed by responsible people at the times designated by the Organizing Committee.

The responsible people must provide an online live stream to the Organizing Committee during the process of receiving and translating problems them into their national language.

49. It is strictly forbidden to open, reproduce, distribute or show the problems to participants in advance.

50. The printing process of problems is carried out under the control of the Proctor and Technical Coordinator. The printing location must be visible through the camera.

51. Printed problems will be distributed to participants only at the official start time set by the Organizing Committee.

52. Each round starts at 09:00 a.m. (UTC+5). Participants will be given tasks at this time. This schedule is subject to change by the Organizing Committee. Any modifications will be communicated to the participating sides in a timely manner.

53. The time allotted for each round is 5 hours, or 300 minutes.

54. After the round ends, i.e. at 02:00 p.m. (UTC+5), participants must stop submitting responses.

B. Procedure for translating problems

55. Countries participating in the online competition may request that informatics problems be translated into their national language.

56. Preliminary translations of problems may be prepared by the KhIMIO-2026 Organizing Committee using artificial intelligence tools, including ChatGPT.

57. The initial translation is only a supporting text. The final responsibility for its accuracy, precision and relevance to the content of the problems lies with the Team Leader of the participating country online.

58. The preliminary English translation prepared by the Host Scientific Committee will be made available to the Team Leader through the online translation system. A link to access the system will be sent to the Team Leader at the scheduled translation start time on the evening before each competition day.

59. The Team Leader may review the initial translation and, if necessary, make grammatical, terminological, or substantive corrections directly within the online translation system.

60. During the process of correcting the translation text are prohibited:

- changing the content of the task;
- simplify or expand the condition;

- provide additional explanation;
- add phrases that point to a solution;
- include any explanation that gives an advantage to the participants.

61. By submitting the final version in the online system, the Team Leader confirms that the translated text faithfully corresponds to the official English problem statement.

62. Once finalized, the Team Leader may save the approved translation as a PDF and print it in preparation for distribution to their participants. However, the translated materials must remain confidential and must not be shared with participants in any form before the official start of the round.

63. Problems and their translations should not be shown to participants, trainers, or other unauthorized people until the translation process is complete.

64. Approved translation problems will be distributed to participants only at the official start time on June 3 and June 4 at 09:00 a.m. (UTC+5). This schedule is subject to change by the Organizing Committee. Any modifications will be communicated to the participating sides in a timely manner.

65. If during the competition an ambiguity, error, or incomprehensible part is discovered in the translated text, participants may contact the Organizing Committee only through the Proctor.

66. Any comments, translation changes, or additional explanations not authorized by the Organizing Committee are prohibited.

C. Submission

67. Participants submit their solutions through the evaluation system. For each problem, the file to be submitted is one C++ source file or one Python source file.

Solutions must read input from standard input (stdin) and write output to standard output (stdout), strictly following the input and output format specified in the problem statement.

68. For each problem, participants can download a sample test case (input and expected output) from the evaluation system to verify the input/output format and test their solutions locally before submission.

69. Each participant can only submit a solution to each task once per minute.

70. A maximum of 100 submissions are allowed per problem, unless otherwise specified in the problem statement.

B. Evaluation

71. The final score for each problem is calculated as follows:

- For each submission, a score is calculated based on the test cases .
- The score for each subtask is the lowest score of the tests in that subtask (unless otherwise specified in the problem).
- The final score for each subtask is the highest score among all submissions.

- The final task score is the sum of all subtask scores.

For example:

If the first submission:

- 30 points for subtask 1,
- If he gets 10 points for subtask 2,

second submission:

- 0 points for subtask 1,
- If he gets 40 points for subtask 2,

final result:

- $30 + 40 = 70$ points.

C. Clarification

72. Participants can submit questions regarding tasks, rules, or evaluations during the competition through the evaluation system.

73. Questions must be written in English only and answers must be given in English only.

74. One of the following answers will be returned to the questions on the problems :

- "YES" - Yes
- "NO" — No
- "ANSWERED IN TASK DESCRIPTION (EXPLICITLY OR IMPLICITLY)" — The answer is in the task text
- "INVALID QUESTION" — The question is incorrectly formed
- "NO COMMENT" — The committee cannot provide this information.

D. Feedback

75. For each submission, the system displays scores for each subtask.

76. If a subtask is not solved, the system reports the first failed test case.

77. Feedback can be one of the following:

- "Output is correct" — The result is correct
- "Output isn't correct" — The result is incorrect
- "Execution timed out" — Time limit exceeded
- "Execution killed" — Memory or other limit exceeded
- "Execution failed because the return code was nonzero" — The program ended with an error
- "Protocol violation"

78. In problems for which partial points are awarded:

- “Output is partially correct” — There may also be feedback that the result is partially correct.

79. The following actions may result in a “Protocol violation” or unknown error:

- Calling the `exit()` function .

However, these situations may not always result in a "Protocol violation".

80. The score shown is provisional and may change later in the following cases:

- Due to a successful post-contest appeal
- When the submission is re-evaluated

For example:

- If the program runs nondeterministically,
- if it is running too close to the time or memory limit.

81. The results of such a reassessment cannot be appealed.

E. Cooperation and Access Rules

82. Each participant must write all solutions independently.

83. The participant may **NOT** use the codes he/she has written before the competition **AND** it is prohibited to obtain the following from the Internet:

- viewing other people's codes,
- search for ready-made solutions,
- reading blogs or theoretical materials,
- other external assistance.

84. During the olympiad, participants are strictly forbidden from discussing problems, solutions, or any competition-related matters with any other person, including other participants, coaches, trainers, or observers. Only the clarification system is allowed to contact the committee.

85. AI tools, including :

- code generators,
- The use of automatic problem solver systems is prohibited.

86. In order to ensure a fair and equitable Olympiad, all participants are required to adhere to the rules of integrity. Violation of the rules may result in disqualification.

87. Participants in the Olympiad in computer science will have the opportunity to view their results online, while those in mathematics will be announced after they have been fully checked.

Appeal procedure

88. Appeals from informatics are accepted only if technical failures, cheating suspicions, procedural violations during the contest time and the decisions of the KHIMIO-2026 Jury and Organizing Committee regarding online participation matters are final.

89. After the announcement of the preliminary results in mathematics/informatics, participating countries have the right to appeal within a specified period.

90. Appeals shall be submitted only by the Team Leader to the Organizing Committee through official communication channels. Appeals submitted directly by participants on their own behalf will not be considered.

The appeal must clearly contain the following:

- participant's name and surname;
- country;
- participant code or number;
- tour (date) number;
- problem number;
- reason for objection;
- the content of the requested revision.

91. Appeals will only be accepted for specific circumstances related to the evaluation of the solution. General objections, appeals not based on the evaluation criteria, or appeals submitted after the deadline will not be considered.

92. Appeals will be considered by the Organizing Committee or a jury appointed by it. The appeal may result in a change in the score or leave it unchanged.

93. The decision on appeal is final.

Required Equipment

94. Computer and Internet

Each exam center must have at least one computer or laptop for monitoring by Organizing Committee and appropriate for the number of participants for informatics and it must:

- stable internet;
- access to the official contest website;
- webcam and microphone support;
- PDF reader program;
- Must have access to email or upload system.

The internet connection must be stable enough to support live video monitoring throughout the competition.

If there force major conditions Organizing Committee allow using additional internet source (mobile hotspot, second router, or other provider)

95. Cameras

Each online testing center must provide live video surveillance throughout the competition. The testing room camera and the camera showing the printing and scanning area must be turned on throughout the competition.

Each center should have at least 2 cameras.

Camera 1: Exam Room Camera

This camera:

- all participants;
- desks;
- the actions of the participants;
- The Proctor must clearly indicate the presence.

The camera must be turned on throughout the competition.

Camera 2: Print and Scan Camera

This camera:

- problems are printed;
- answers are collected;
- answers are scannable;
- should indicate the area where the files will be prepared for upload.

96. Camera Quality

Each camera must meet at least the following requirements:

- minimum quality: 720p HD;
- recommended quality: 1080p Full HD;
- 25–30 fps;
- stable video communication;
- clearly show the room;
- The lens is not covered.

The organizing committee in advance:

- screenshot,
- testing video,
- or may require a live test.

97. Procedure for video surveillance and recording

The examination process must be videotaped, if requested by the Organizing Committee. The video recording will continue before the start of the examination,

from the moment the participants are placed in the room, until all answer sheets are collected, scanned, and uploaded to the official platform.

The video recording should clearly show the following:

- examination room;
- all participants;
- participants' desks;
- The presence of a Proctor;
- printing and scanning process.

The video recording must be retained by the Examination Center or Team Leader for at least **30 days from the date of completion of the exam.**

If requested by the Organizing Committee, the video recording must be sent to the Organizing Committee within the specified period.

Failure to provide a video recording or intentionally blocking the camera's view during the exam may be considered a violation of the exam rules.

98. Microphone

There must be at least one working microphone.

The sound in the exam room should be audible when necessary through the microphone.

The microphone must not be turned off without the permission of the organizing committee.

99. Printer

Every center should have a working printer.

The printer must be able to print the following:

- problems ;
- answer sheets;
- official instructions.

The printer must be checked for working condition before the competition.

100. Scanner (For Mathematics)

Every exam center should have a working scanner.

The scanner should be able to produce clear PDFs of participants' responses.

Procedure in case of technical malfunctions

101. If during the competition there is an internet connection failure, camera or microphone malfunction, printer or scanner malfunction, problems connecting to the official platform, or delays in uploading files, the Technical Coordinator must immediately notify the KhIMIO-2026 Organizing Committee.

102. In technical failure, the Proctor must maintain the integrity of the examination process, ensure that there is no unauthorized communication with participants, and that the confidentiality of problems is not violated.

103. A technical problem must be resolved as quickly as possible. If necessary, the Organizing Committee may request evidence of a technical problem. Such evidence may include:

- screenshot;
- video recording;
- Written explanation from the technical coordinator;
- Written report from the Proctor.

104. If it is not possible to send the response files by the deadline due to a technical failure, the Technical Coordinator must notify the Organizing Committee before the deadline.

The final decision on accepting or rejecting late submissions due to technical difficulties will be made by the Organizing Committee.

If the Organizing Committee believes that a technical malfunction has affected the integrity of the examination, it reserves the right to cancel, reconsider, or take other measures against the relevant participant or country.

Determining the winners.

105. The medal limits of the International Olympiad shall be determined based on the number and results of the offline participants. The percentage of award winners shall not exceed 60% of the offline participants, and the medals shall be distributed in the ratio of 1:2:3 for gold, silver, and bronze medals, respectively.

106. Medals shall not be awarded to online participants. Instead, diplomas shall be awarded to winners, and electronic certificates shall be issued to participants according to their scores.
